; Sequence 29549, Application US/09513999C
; Patent No. 6783961
; GENERAL INFORMATION:
; APPLICANT: Duclert, A.
; APPLICANT: Duclert, A.
; APPLICANT: Duclert, A.
; APPLICANT: Glordano, J.Y.
; TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
; Patent No. 6783961
; FILE REFERENCE: 59.U82.REG
; CURRENT FILING DATE: 200-22-4
; PRIOR PILING DATE: 1999-02-26
; NUMBER OF FILING DATE: 1999-02-26
; NUMBER OF SEQ ID NOS: 36681
; SOFTWARE: Patent.pm
; SEQ ID NO 29549
; LENGTH: 221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MS-09-270-767-28457/C

Sequence 28457, Application US/09270767

Patent No. 5703491

SEREAL INFORMATION:
APPLICANT: Homburger et al.
TILLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster.
TILLE OF INVENTION: NUCLEIC STATE OF THE PREPERBNCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

NUMBER OF SEQ ID NOS: 62517

Sequence 32, Application US/08934097A

Patent No. 6210880

GENERAL INFORMATION:

APPLICANT: Lyamichev, Victor I.

APPLICANT: Fors, Lance

APPLICANT: Fors, Lance

APPLICANT: Ners, Lance

TITLE OF INVENTION: Polymorphism Analysis By Nucleic Acid

TITLE OF INVENTION: Structure Probing With Structure-Bridging

TITLE OF INVENTION: Oligonucleotides.

TITLE OF SEQUENCES: 51

Patent No. 6210880
GENERAL INFORMATION:
APPLICANT: Lance
APPLICANT: Fors, Lance
APPLICANT: Brow, Mary Ann D.
APPLICANT: Nerl, Bruce Polymorphism Analysis By Nucleic Acid
TITLE OF INVENTION: Structure Probing With Structure-Bridging
TITLE OF INVENTION: Oligonucleotides.
                                                                                                                                                           Length 240;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 240;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            66.7%; Score 12; DB 3; Length 24C 83.3%; Pred. Patent No. 6210880
GENERAL INFORMATION:
APPLICANT: Brow, Mary Ann D.
APPLICANT: Brow, Mary Ann D.
APPLICANT: Brow, Mary Ann D.
APPLICANT: Prose, Lance
APPLICANT: Pari, Bruce P.
TITLE OF INVENTION: Polymorphism Analysis By Nucleic Acid
TITLE OF INVENTION: Structure Probing With Structure-Bridging
TITLE OF INVENTION: Oligonucleotides.
NUMBER OF SEQUENCES: 51
CORRESCONDENCE ADDRESS:

j Sequence 35, Application US/08221653

j Patent No. 6190864

j GENERAL INFORMATION:

APPLICANT: Tai-An Cha

TITLE OF INVENTION: HCV GENOMIC SEQUENCES FOR

TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

NUMBER OF SEQUENCES: 147

CORRESPONDENCE ADDRESS:

ADDRESSEE: Wolf, Greenfield & Sacks, P.C.

STREET: 600 Atlantic Avenue
                                                                                                                                                                                                                                                                                                                                                             2; Mismatches

    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description
